

Bootstrap Interview Guide (Complete)

Important Bootstrap interview questions with concise definitions and practical HTML examples.

1. What is Bootstrap?

Definition

Bootstrap is an open-source CSS framework used to build responsive, mobile-first websites quickly using prebuilt components and utility classes.

Example

```
<link href='bootstrap.min.css' rel='stylesheet'>
```

2. Bootstrap Features

Definition

Bootstrap provides a responsive grid, reusable UI components, utility classes, JavaScript plugins, and customization using Sass.

Example

```
<div class='container'>Content</div>
```

3. Bootstrap 4 vs 5

Definition

Bootstrap 5 removed jQuery dependency, added utility APIs, improved grid, and introduced new components like Offcanvas.

Example

```
Bootstrap 5 uses data-bs-toggle.
```

4. Mobile First

Definition

Bootstrap follows a mobile-first approach where styles are designed for small screens first and enhanced for larger screens.

Example

```
<div class='col-12 col-md-6'></div>
```

5. Responsive Design

Definition

Responsive design allows layouts to adapt automatically to different screen sizes using the grid and breakpoints.

Example

```
<img class='img-fluid'>
```

6. Breakpoints

Definition

Bootstrap breakpoints are xs, sm, md, lg, xl and xxl for responsive layouts.

Example

```
col-sm-6 col-lg-4
```

7. Container vs Container-fluid

Definition

container has fixed responsive widths while container-fluid always uses 100% width.

Example

```
<div class='container-fluid'></div>
```

8. Grid System

Definition

Bootstrap uses a 12-column flexbox grid system to build responsive layouts.

Example

```
<div class='row'><div class='col-md-6'></div><div class='col-md-6'></div></div>
```

9. Row and Column

Definition

Rows group columns, and columns define responsive widths inside a row.

Example

```
<div class='row'><div class='col'></div></div>
```

10. Offset Classes

Definition

Offset classes create empty space before columns.

Example

```
<div class='col-md-4 offset-md-2'></div>
```

11. Order Classes

Definition

Order classes change column order without modifying HTML.

Example

```
class='order-2 order-md-1'
```

12. Gutter

Definition

Gutters are spacing between columns and can be changed using gx-* and gy-* classes.

Example

```
<div class='row gx-4 gy-2'></div>
```

13. Display Utilities

Definition

Display utilities control element visibility and display type.

Example

```
class='d-none d-md-block'
```

14. Spacing Utilities

Definition

Spacing utilities apply margin and padding using m-* and p-* classes.

Example

```
class='mt-3 px-4'
```

15. Flex Utilities

Definition

Bootstrap provides flex utilities for alignment and layout.

Example

```
class='d-flex justify-content-between align-items-center'
```

16. Navbar

Definition

Navbar creates responsive navigation with collapse support.

Example

```
<nav class='navbar navbar-expand-lg navbar-dark bg-dark'></nav>
```

17. Card

Definition

Cards display content inside flexible containers.

Example

```
<div class='card'><div class='card-body'>Hello</div></div>
```

18. Modal

Definition

Modal displays content in a popup dialog.

Example

```
<button data-bs-toggle='modal' data-bs-target='#m'></button>
```

19. Accordion

Definition

Accordion shows collapsible content panels.

Example

```
<div class='accordion'></div>
```

20. Carousel

Definition

Carousel creates responsive image or content sliders.

Example

```
<div id='carouselExample' class='carousel slide'></div>
```

21. Alert

Definition

Alerts display contextual messages.

Example

```
<div class='alert alert-success'>Saved</div>
```

22. Badge

Definition

Badges highlight counts or labels.

Example

```
<span class='badge bg-primary'>New</span>
```

23. Button Classes

Definition

Bootstrap provides predefined button styles.

Example

```
<button class='btn btn-primary'>Save</button>
```

24. Table Classes

Definition

Bootstrap tables support striped, bordered and responsive layouts.

Example

```
<table class='table table-striped'></table>
```

25. Responsive Table

Definition

Wrap tables with table-responsive for smaller screens.

Example

```
<div class='table-responsive'></div>
```

26. Forms

Definition

Bootstrap styles inputs, selects, checkboxes and validation.

Example

```
<input class='form-control'>
```

27. Input Group

Definition

Input groups combine inputs with buttons or text.

Example

```
<div class='input-group'></div>
```

28. Floating Labels

Definition

Floating labels move labels above focused inputs.

Example

```
<div class='form-floating'></div>
```

29. Form Validation

Definition

Validation uses valid/invalid classes and feedback messages.

Example

```
class='is-invalid'
```

30. Bootstrap Icons

Definition

Bootstrap Icons provide scalable SVG icons.

Example

```
<i class='bi bi-house'></i>
```

31. Offcanvas

Definition

Offcanvas creates side panels for menus.

Example

```
<div class='offcanvas offcanvas-start'></div>
```

32. Tooltip

Definition

Tooltips display small hover messages.

Example

```
data-bs-toggle='tooltip'
```

33. Popover

Definition

Popovers display richer contextual information.

Example

```
data-bs-toggle='popover'
```

34. Pagination

Definition

Pagination helps navigate large datasets.

Example

```
<ul class='pagination'></ul>
```

35. Dropdown

Definition

Dropdowns show collapsible menus.

Example

```
<button class='dropdown-toggle'></button>
```

36. Progress Bar

Definition

Progress bars indicate task completion.

Example

```
<div class='progress'><div class='progress-bar w-75'></div></div>
```

37. Spinner

Definition

Spinners indicate loading.

Example

```
<div class='spinner-border'></div>
```

38. Bootstrap Utilities

Definition

Utility classes provide quick styling without custom CSS.

Example

```
class='text-center bg-light rounded shadow'
```

39. Bootstrap Sass

Definition

Bootstrap can be customized using Sass variables and partials.

Example

```
$primary: #0d6efd;
```

40. Dark Mode

Definition

Bootstrap supports dark themes using data attributes and utility classes.

Example

```
<html data-bs-theme='dark'>
```
